Shivam Gautam Data Engineer

shivamsinghgautam934@gmail.com 7828490627 Pune, India
linkedin.com/in/shivam-gautam-529050184

Profile

IT professional with 4+ years of experience possessing strong analytical skills and proficient in handling large data sets. Skilled in providing actionable insights to the business, managing key performance metrics, benchmarking, and reporting for client implementations. Highly motivated to develop innovative data strategies for transformative solutions.

Skills

Cloud
AWS (Databricks, Cloud Storage, Airflow), Azure(ADF, ADB and ADLS)

Databases and Languages
Python, Microsoft SQL Server, Oracle PL/SQL,DBT, Java

Big Data Framework:
Big data, Pyspark, Spark SQL

Reporting Visualization Tools
Basics of Microsoft PowerBI

Management Utilities
SNOW, JIRA

Soft Skills
Business Communication, Teamwork, Adaptability, Flexibility, Quick Learner, Calm and Composed

Analytical Skills
Data Cleaning, Data Manipulation, Data Visualization, ETL

Certificates

- Microsoft Certified : Azure Data Engineer (DP203)
- Databricks Certified : Data Engineer Associate
- Oracle Certified: Oracle Cloud Infrastructure Certified

Education

Bachelor Of Technology (Computer Science - 9.16 C.G.P.A.), Technocrats Institute Of Technology
2018 Jul – 2022 Jun | Bhopal, India

Higher Secodary Education,
Kendriya Vidyalaya No.2 G.C.F. Jabalpur (C.B.S.E.)
2017 Apr – 2018 Mar | Jabalpur, India

High School Education,
Kendriya Vidyalaya Dindori (C.B.S.E)
2015 Apr – 2016 Mar | Dindori, India

Professional Experience

Yash Technologies, Sr. Software Engineer (Sr. Data Engineer)
2026 Oct – Present | Pune, India

- Designed, built, and maintained **end-to-end ETL/ELT pipelines** using **Python and Spark SQL**,processing millions of records daily with high reliability.
- Developed and optimized **data pipelines using Apache Spark (PySpark)** for large-scale batch processing, reducing runtime by **30–40%**.
- Implemented data ingestion frameworks from diverse sources including **REST APIs, Apache Kafka, relational databases, and cloud storage**.
- Built and managed **workflow orchestration** using **Databricks workflow**, including DAG design, dependency management, and failure handling.
- Followed **best practices for version control, code reviews, and CI/CD**, improving deployment stability.
- Ensured **data security and governance** through role-based access, encryption, and compliance standards.

Infosys Ltd, Data Engineer (Associate Consultant)
2025 Jul – 2026 Oct | Pune, India

- Designed, built, and maintained **end-to-end ETL/ELT pipelines** using **Python and Spark SQL**, processing millions of records daily with high reliability.
- Developed and optimized **data pipelines using Apache Spark (PySpark)** for large-scale batch processing, reducing runtime by **30–40%**.
- Built and managed **workflow orchestration** using **Databricks workflow**, including DAG design, dependency management, and failure handling.
- Designed and maintained **cloud-based data warehouses** (Snowflake / Redshift / BigQuery), supporting analytics and reporting use cases.
- Implemented **data ingestion frameworks** from diverse sources including **REST APIs, relational databases, and cloud storage**.
- Optimized **SQL queries, indexing, and partitioning strategies**, significantly improving query performance and reducing compute costs.
- Created and maintained **dimensional data models (star and snowflake schemas)** to support BI tools and analytics teams.
- Implemented **data quality checks, validation frameworks, and monitoring**, proactively identifying and resolving data issues.
- Worked on **incremental and CDC-based data loads** to ensure data freshness and consistency.
- Integrated **real-time or near-real-time pipelines** using **Kafka** for streaming data processing.
- Collaborated closely with **data scientists, analysts, and product teams** to translate business requirements into scalable data solutions.
- Deployed and maintained pipelines in **cloud environments (AWS)** with focus on reliability and scalability.
- Followed **best practices for version control, code reviews, and CI/CD**, improving deployment stability.
- Ensured **data security and governance** through role-based access, encryption, and compliance standards.

Awards

3x Pat on the back award and recipient of the Cheers Award for outstanding performance in respective quarters., Cognizant

Recognised as the best performer in the team for 2024Q2 showcasing dedication and excellence in handling data to provide business expected outcome., Cognizant

Award and recipient of the Rise Insta Award for outstanding performance in respective quarters., Infosys

Projects

Data Engineering and Analytics

- Built and orchestrated scalable data pipelines using **Python, SQL, and Apache Airflow** for a pharmaceutical client.
- Ingesting data from diverse sources **SAP BW, SAP S/4HANA, Kinaxis RR, and flat file sources**.
- Automated ETL workflows with data validation, monitoring, and performance optimization.
- Delivered reliable, analytics-ready datasets while meeting compliance and data quality requirements.
- **Identified, analyzed, and resolved data-related issues** to ensure data accuracy and reliability.
- **Troubleshot and resolved data discrepancies and pipeline failures** across multiple source systems.
- **Performed root cause analysis on data issues** and implemented corrective solutions to prevent recurrence.
- **Monitored data pipelines and addressed data quality issues** to maintain reliable downstream reporting.

DNA - Lakehouse Project

- Built a data platform (**Databricks-based Lakehouse**) using **PySpark, SQL, and Python**, following **Medallion architecture(Bronze, Silver, Gold layers)** to ensure structured data flow, data quality, and reusability.
- Orchestrated data pipelines using **Databricks Workflows** with robust scheduling and monitoring.
- Developed **PySpark-based transformation pipelines** to clean, enrich, and aggregate raw data into analytics-ready datasets.
- Applied **data quality checks and validation logic** across Silver and Gold layers to ensure reliable datasets.
- Collaborated with analytics and business teams to deliver **trusted Gold-layer datasets** for dashboards and insights.
- Followed **best practices for code versioning, modular design, and deployment** within the Databricks environment.

Cognizant Technology Solutions,
Data Engineer (Associate : Full-time)
2022 Aug – 2025 Jul | Pune, India

- **ETL Developments and Data Enablement:**
  - Developed a **config-driven, generic pipeline** capable of handling data ingestion from different sources (**SAP BW, SQL Server, Json, Parquet, CSV**).
  - Automate the ETL using Spark, Python, Databricks resulting in increased data load efficiency and **optimized DAG execution time**.
  - Managed and maintained SQL database, ensuring data accuracy, security, and optimal performance. Proficient in writing complex **SQL queries** to **extract, transform, and analyze data (ETL)**.
  - Used transformations to optimize the long-running queries and repartition, caching, coalesce the data to avoid skewness which results in **reducing processing time by 60%**, thus **saving cost by 30%**
  - Leveraged **AWS S3** for scalable storage of raw and processed data, utilizing **Parquet** and **AVRO** format for efficient data storage management
- **Data Engineering: Architecture and Optimization**
  - Identified key inefficiencies in existing queries, implementing optimization techniques that **reduced processing time by 60%**; enhanced **user engagement metrics** through refined data workflows contributing to an overall increase of 20% in active users.
  - Designed transformation logic including **Spark SQL, PySpark, AWS** and **Snowflake**, with a focus on optimizing data workflows for enhanced accuracy and **efficiency by 50%**. Used **GIT** to commit changes in the existing codes and to merge it in QA & prod and utilized **Bitbucket** for version control purpose.
  - Used **Airflow DAG for orchestrating** ETL/ETL data pipelines & to schedule & monitor sequences of tasks, resulting in increase in operational efficiency and improve data reliability for business decision.
  - Independently contributed as Data Engineer, ingesting data from source to delta table. Gathered and addressed client requirements, drove the project, and applied **Spark optimizations** to delta table containing approximately 4 billion records, achieving a **70% improvement in query time (12-15 seconds).**
  - Enhance the code by performing CRQ based on business requirement and worked on the development of the codes by following the best coding practices
